

# Medication Chart Intervention Improves Prophylaxis Prescription in Patients at High Risk of Venous Thromboembolism

---

**Lee MMW<sup>1</sup>, Liu DSH<sup>1</sup>, Spelman T<sup>1</sup>, Cade J<sup>1</sup>, MacIsaac C<sup>1</sup>, Harley N<sup>1</sup>, Wolff A<sup>2</sup>**

- 1. The Royal Melbourne Hospital, Intensive Care Unit***
- 2. Wimmera Health Care Group, Wimmera Base Hospital***

# Venous Thromboembolism: A Major Healthcare Problem

---

- ❑ Major cause of morbidity and mortality in hospitalised patients
- ❑ 1.0% VTE prevalence in High risk medical patients
- ❑ Overall mortality: 10.0%
- ❑ SINGLE MOST preventable cause of hospital mortality in Australia

# Venous Thromboembolism Prophylaxis

- Mechanical prophylaxis:
  - Thromboembolic Deterrent Stockings (TEDS)
  - Intermittent Pneumatic Compression Stockings (IPCS)
- Chemical prophylaxis:
  - Unfractionated Heparin
  - Low Molecular Weight Heparin i.e. Enoxaparin
  - Aspirin
- Strong evidence-base guidelines for VTE prevention

#### Summary

**Background** Information about the variation in the risk for venous thromboembolism (VTE) and in prophylaxis *Lancet 2008; 371: 387-94*

# Venous Thromboembolism Prophylaxis: Existing Strategies

---

- Published strategies to improve VTE prophylaxis uptake:
  - Staff education (*Devlin et al 1999, Anderson et al 1998*)
  - Laminated algorithm cards (*Frankel et al 1999*)
  - Continuous nursing surveillance (*Hall and Eccles 2000*)
  - Computer support systems (*Taylor et al 2000, Macdonald et al 2002*)
  - Audits and feedback cycles (*McEleny et al 1998*)
  
- Outcomes?
  - Variable success
  - Problems encountered
    - Costly to implement
    - Non-sustained effect
    - Required consistent and self-motivated modification in clinical practice

# The Modified Medication chart: A potential solution

- 3 instruments embedded into routine inpatient medication chart

## Venous Thromboembolism (VTE) Risk Assessment

All inpatients should have their VTE risk assessed and documented by a medical staff member at the time of admission.

### Step 1. Determine HIGHEST Risk Category

Risk Category	Surgical Risk Factors	Medical Risk Factors	Recommended Prophylaxis
<b>High</b>	<ul style="list-style-type: none"> <li>• Orthopaedic surgery of pelvis, hip or lower limb</li> <li>• Multiple trauma</li> <li>• Major Surgery* and age &gt; 60 years</li> <li>• Major Surgery* and age 40-60 years <b>with</b> medical risk factors</li> </ul>	<ul style="list-style-type: none"> <li>• Ischaemic stroke (NOT within first 48 hours)</li> <li>• History of DVT/PE</li> <li>• Decompensated heart failure</li> <li>• Active cancer</li> <li>• Acute on chronic lung disease</li> <li>• Acute on chronic inflammatory disease (eg. IBD, SLE, RA)</li> <li>• Immobility</li> <li>• Age &gt; 60 years, <b>unless</b> otherwise well and ambulant, with no other risk factors</li> </ul>	<p><b><u>For surgical patients</u></b>                      Heparin 5000 units subcut twice daily                      Or                      Enoxaparin 40 mg subcut once daily* for patients of orthopaedic surgeons  <b>AND</b>                      Graduated compression stockings (unless contraindicated)</p> <p><b><u>For medical patients</u></b>                      Heparin 5000 units subcut twice daily                      Or                      Enoxaparin 40 mg subcut once daily*                      Or                      Graduated compression stockings (if chemoprophylaxis is contraindicated)</p>
<b>Moderate</b>	<ul style="list-style-type: none"> <li>• Major surgery* and age 40-60 years <b>without</b> medical risk factors</li> <li>• Minor surgery and age &gt; 60 years</li> <li>• Minor surgery and age 40-60 years <b>with</b> medical risk factors</li> </ul>		<p>Heparin 5000 units subcut twice daily                      Or                      Enoxaparin 20 mg subcut once daily  <b>AND</b>                      Graduated compression stockings (unless contraindicated)</p>
<b>Low</b>	<ul style="list-style-type: none"> <li>• Major surgery*, age 16-40 years <b>without</b> medical risk factors</li> <li>• Minor surgery, age 16-40 years <b>with</b> medical risk factors</li> <li>• Minor surgery and age 16-60 years <b>without</b> medical risk factors</li> </ul>	<ul style="list-style-type: none"> <li>• None of the above (medical risk factors)</li> </ul>	<p><b><u>For surgical patients</u></b>                      Graduated compression stockings (optional)</p> <p><b><u>For medical patients</u></b>                      No prophylaxis recommended</p>

**Step 2. Check whether there are any contraindications (C/I) to VTE prophylaxis**

<b>Contraindications to:</b>	
<b>Heparin / Enoxaparin:</b>	Active or high risk of bleeding, adverse reaction to heparin or enoxaparin, haemorrhagic stroke, on therapeutic anticoagulation, TURP
<b>Graduated compression stockings:</b>	Severe peripheral vascular disease, severe peripheral neuropathy, severe lower limb oedema, extreme leg deformity, recent skin graft, dermatitis

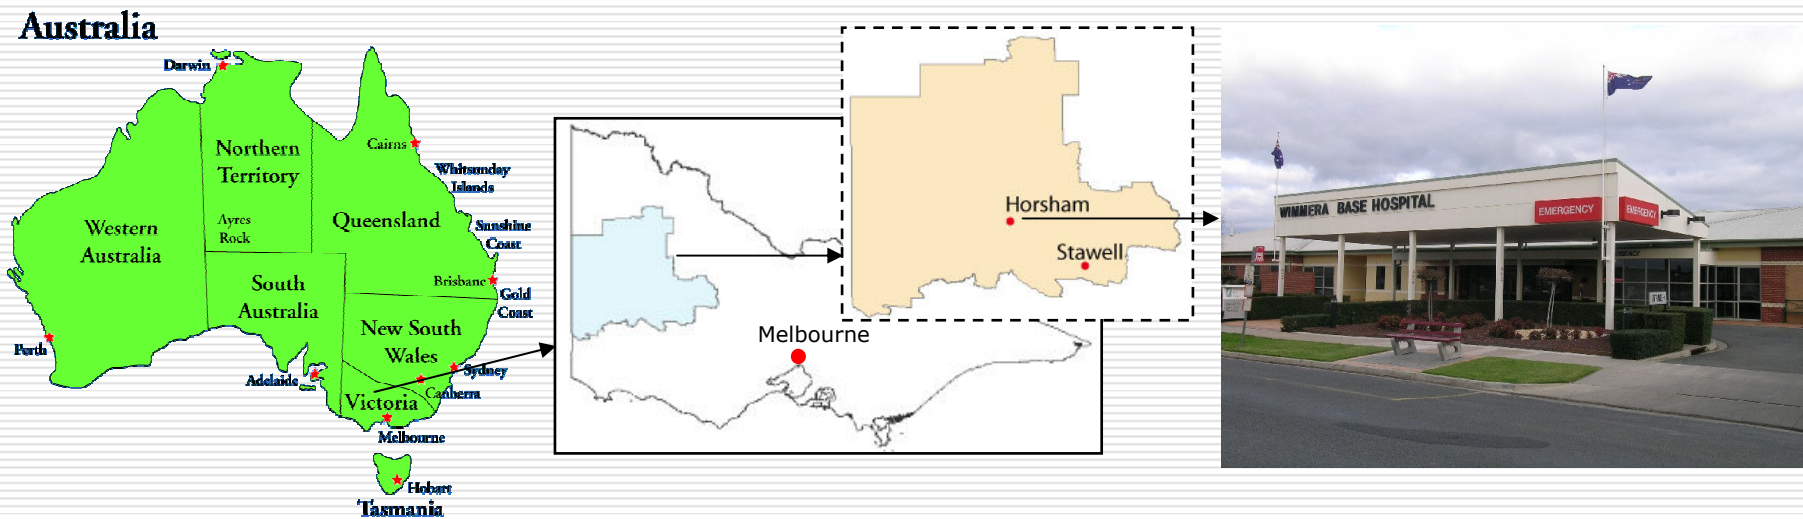

**Step 3. Document risk category & prescribe prophylaxis on VTE Prophylaxis section of medication chart**  
 VTE Risk category, date, doctor's name and signature must be documented even if prophylaxis is not prescribed

**VTE PROPHYLAXIS**

# Wimmera Base Hospital: Ideal Pilot Platform

- ❑ Modified medication chart: Launched June 2008
- ❑ Regional referral centre
  - Wimmera & Southern Mallee region, Victoria, Australia
- ❑ Catchment population: 54,000
- ❑ Hospital capacity: 80 acute beds, 5 high dependency beds
- ❑ Patient flow: 10,000 inpatient admissions per annum

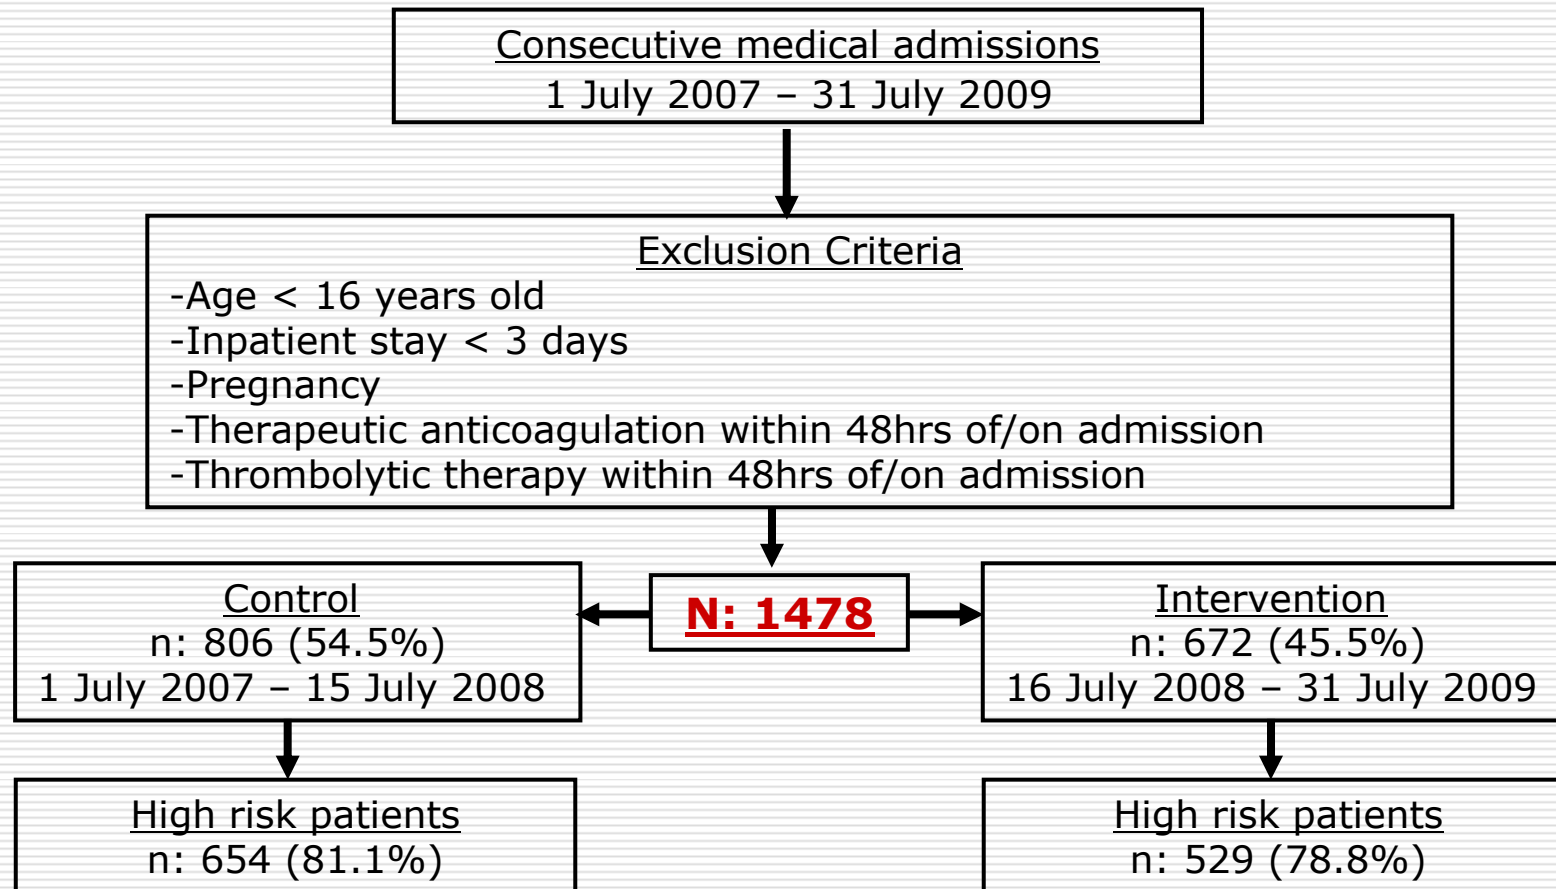

# Study Objectives

---

- To demonstrate that medication chart intervention
  1. Increases VTE prophylaxis utilisation in patients at high risk of VTE
  2. Modifies VTE prophylaxis prescribing behaviour through increasing clinician's awareness of patient-specific VTE risk factors

# Study Design: Retrospective Study

---

# Data Collection

---

- Every admission: individual analysis unit
- Retrospective review of medical records
- Standardised data collection form (10% inter-rater agreement)

## Patient characteristics

- Age:.....
- Sex: M/F
- Weight (kg):.....
- Admission date:.....
- Duration of hospital stay (days):.....

## Admitted from: (Please tick)

- Emergency
- Elective waiting list
- Transfers from another healthcare facility
- Information unavailable

## Discharge disposition: (Please tick)

- Home
- Residential care/Nursing home
- Death
- Transfer to another healthcare facility
- Rehabilitation care/hospital
- Information unavailable

# Data Collection: Admission Diagnosis

---

## Principal admission diagnosis

Medical conditions (Please tick)

- Neurological disease
  - Stroke: Ischaemic/Haemorrhagic
  - TIA
  - Cranial haematomas
  - Epilepsy
  - Others:
- Gastrointestinal
  - Hepatic disorders
  - Biliary tree disorders
  - Pancreatic disorders
  - GIT bleeding
  - Peptic ulcer disease
  - Gastroenteritis
  - Colitis
  - Others:
- Cardiovascular disease
  - Ischaemic heart disease
  - Congestive heart failure
  - Arrhythmia
  - Others:
- Respiratory disease
  - COPD exacerbation
  - Asthma exacerbation
  - Bronchiectasis exacerbation
  - Pneumonia
  - Others:
- Rheumatologic disease
  - Connective tissue disease
  - Osteoarthritis
  - Other arthritis
- Endocrine disease
  - Diabetes and its complications
  - Thyroid disorders: hyperthyroid/hypothyroid
  - Osteoporosis
- Malignancy
- Renal failure (Cr > 200 umol/L)
- Syncope
- Non-pulmonary sepsis
- Discharge planning
- Psychiatric disorders
- Other diagnosis:.....

Parameters adapted from the ENDORSE Study, Lancet 2008, 371: 387-94

---

# Data Collection: Risk Factors and Categories

---

## **Venous thromboembolism risk factors and category at time of admission**

For medical patients

- Medical risk factors (Please tick)
- Age > 60y/o
- Immobility (bed ridden) >1 day
- Known thrombophilia
- History of VTE
- Active malignancy or chemotherapy
- Ischaemic stroke (Not within first 48hrs)
- Decompensated heart failure
- Acute on chronic lung disease
- Acute on chronic inflammatory disease (e.g. IBD, SLE, RA)
- Hormonal replacement therapy or contraception

Risk category (Please tick)

- High risk (>1 risk factors)
- High risk (=1 risk factors)
- Low risk (0 risk factor)

# Data Collection: Prophylaxis Type and Contraindications

## Use of Venous thromboembolism prophylaxis

When was VTE prophylaxis ordered (Please tick):

- Day 0                       Day 1                       Day 2                       Day 3 or later

Methods of VTE prophylaxis used (Please tick):

- TED stockings
- Unfractionated heparin: 5000 units
- Once daily (d)                       Twice daily (bd)                       Three times daily (tds)
- Low molecular heparin (Enoxaparin/Clexane)
- Dose: 20mg/40mg                       Once daily (d)                       Twice daily (bd)
- Others:.....

## Contraindications to methods of VTE prophylaxis

CI to pharmacological prophylaxis (Please tick):

- Any active bleeding
- Congenital bleeding disorder
- Acquired bleeding disorder
- Haemorrhagic stroke
- Thrombocytopenia ( $< 100 \times 10^9$  cells/L)
- Gastrointestinal bleed within the last 3 months
- Bacterial endocarditis
- Hepatic failure
- TURP

Therapeutic anticoagulation

CI to mechanical prophylaxis (Please tick):

- Severe peripheral vascular disease
- Severe peripheral neuropathy
- Severe lower limb oedema
- Extreme leg deformity
- Recent skin graft
- Dermatitis

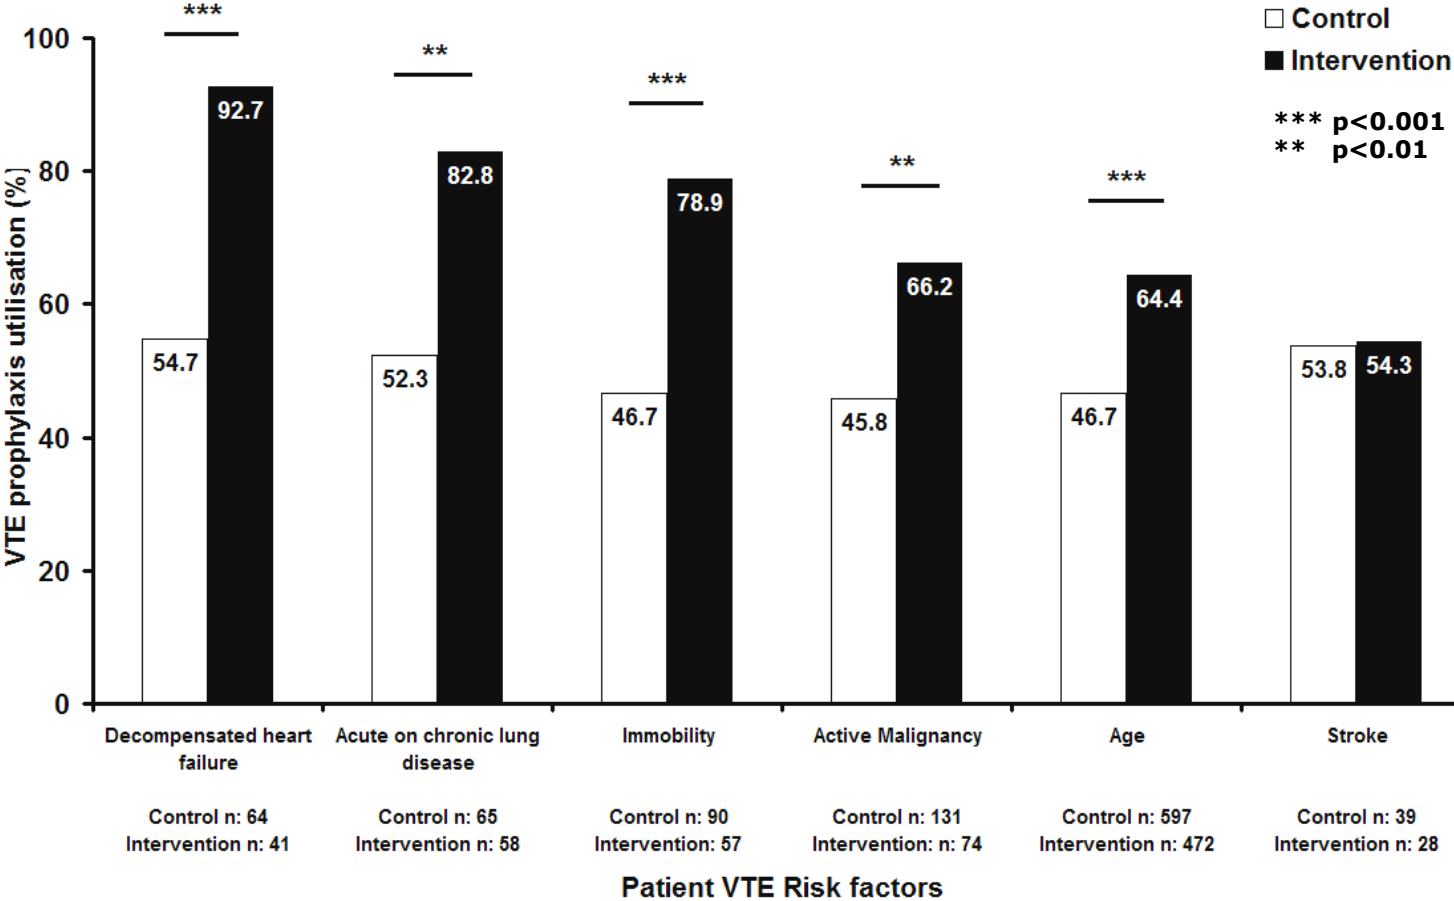

# Study Population: Demographics

Patient Demographics	Control median (IQR)	Intervention median (IQR)	p-value
Age	77 (70 – 83)	78 (68 – 84)	0.974
Weight	70 (59 – 85)	69 (60 – 82)	0.881
Length of Stay	6 (4 – 9)	6 (4 – 9)	0.683
	Control n (%)	Intervention n (%)	p-value
<b><u>Gender</u></b>			
Female	361 (55.2)	290 (54.8)	0.897
Male	293 (44.8)	239 (45.2)	
<b><u>Source of admission</u></b>			
Emergency	591 (90.4)	482 (91.1)	0.688
Transfer	46 (7.0)	41 (7.8)	0.637
Elective	17 (2.6)	6 (1.1)	0.070
<b><u>Dis charge destination</u></b>			
Home	464 (70.9)	390 (73.7)	0.289
Transfer	74 (11.3)	61 (11.5)	0.907
Nursing home	78 (11.9)	57 (10.8)	0.543
Death	38 (5.8)	21 (4.0)	0.148

## Study Population: Admission Diagnosis

Admission diagnosis	Control n (%)	Intervention n (%)	p-value
Respiratory conditions	112 (17.1)	114 (21.6)	0.054
Cardiovascular conditions	91 (13.9)	62 (11.7)	0.264
Oncology & haematological conditions	91 (13.9)	62 (11.7)	0.264
Discharge planning	79 (12.1)	64 (12.1)	0.992
Sepsis: Non-pulmonary source	60 (9.2)	49 (9.3)	0.958
Psychiatric conditions & Toxicology	23 (3.5)	13 (2.5)	0.292
Neurological conditions	64 (9.8)	49 (9.3)	0.761
Gastrointestinal & hepatobiliary conditions	38 (5.8)	35 (6.6)	0.567

# Medication Chart Intervention Increases Chemical VTE Prophylaxis in High Risk Patients

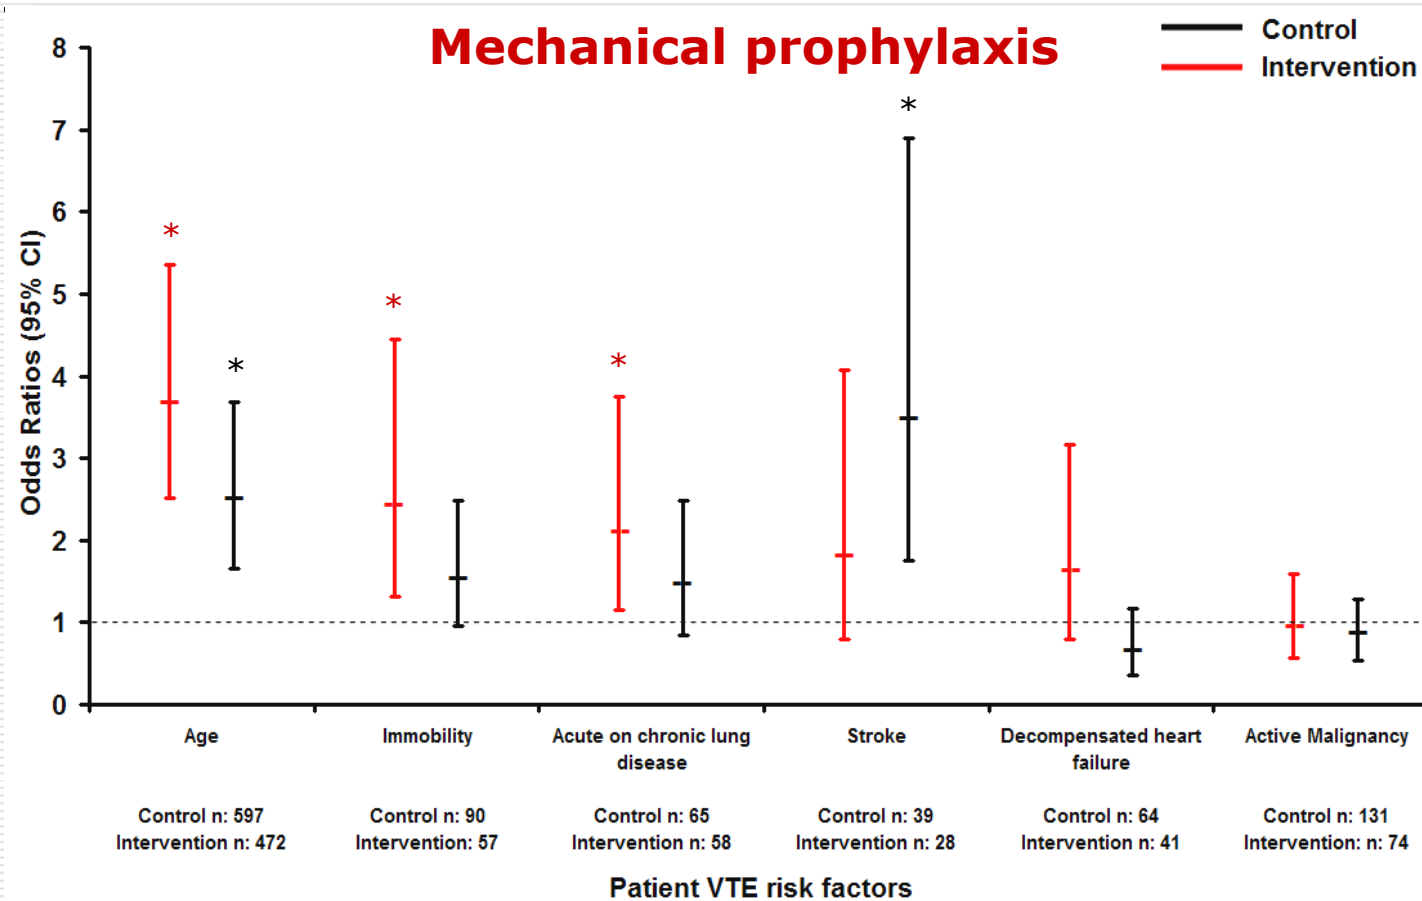

# Medication Chart Intervention Increases Mechanical VTE Prophylaxis in High Risk Patients

# Medication Chart Intervention Increases Awareness of Patient-Specific Risk Factors and Modifies VTE Prophylaxis Prescribing Behaviour

# Medication Chart Intervention Increases Awareness of Patient-Specific Risk Factors and Modifies VTE Prophylaxis Prescribing Behaviour

## Discussion: Study Limitations

---

- Single centre study
- Not tertiary referral centre
- Limited VTE prophylaxis options
  - Chemical prophylaxis
    - Low molecular weight heparin
    - Unfractionated heparin
  - Mechanical prophylaxis
    - Thromboembolic Deterrent Stockings (TEDS)
- Study design
  - Not Randomised Control Trial
  - Assume random sampling over 2 year study period

# Conclusions

---

- Medication chart intervention
  - VTE prophylaxis prescription prompt
  - Patient risk stratification instrument
  - Contra-indication screen instrument
  
- 1. Increases VTE prophylaxis utilisation in patients at high risk of VTE
  
- 2. Modifies VTE prophylaxis prescribing behaviour through increasing clinician's awareness of patient-specific VTE risk factors
